Python List Assignments (Using List Methods)

1. Create an empty list and add 5 integers using append().
2. Create a list of strings and add a new string at the end using append().
3. Insert an element at the 3rd position using insert().
4. Create a list and remove a specific element using remove().
5. Remove the last element of a list using pop().
6. Remove an element from a specific index using pop(index).
7. Create a list and clear all elements using clear().
8. Copy one list into another using copy().
9. Count how many times a specific element appears using count().
10. Sort a list of numbers in ascending order using sort().
11. Sort a list of numbers in descending order using sort(reverse=True).
12. Reverse the elements of a list using reverse().
13. Find the index of a specific element using index().
14. Extend a list by adding elements of another list using extend().
15. Create a list and check membership using in keyword.
16. Create a list of numbers and find max and min values.
17. Create a list of mixed data types and display them.
18. Take user input to create a list and display it.
19. Create a list of 10 numbers and remove duplicates.
20. Create a list and slice the first 5 elements.
21. Create a list and slice the last 3 elements.
22. Create a list and replace an element at a given index.
23. Create a list and find the sum of elements.

24. Create a list and find the average of elements.

25. Create a list and check if it is empty.

26. Create two lists and merge them into one.

27. Create a list and convert it into a tuple.

28. Create a tuple and convert it into a list.

29. Create a list and delete an element using del keyword.

30. Create a list of strings and sort alphabetically.

31. Create a list of numbers and sort without using sort() (use sorted()).

32. Create a list and reverse it without using reverse() (use slicing).

33. Create a list and find the second largest number.

34. Create a list and find common elements between two lists.

35. Create a list and remove all even numbers.

36. Create a list and remove all odd numbers.

37. Create a list and check palindrome list.

38. Create a list and count total elements.

39. Create a nested list and access inner elements.

40. Create a list and demonstrate all list methods.
